WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.

PCT/JP2004/008798

Box No. V Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	2, 5-6	YES
	Claims	1, 3-4	NO
Inventive step (IS)	Claims	2, 6	YES
	Claims	1, 3-5	NO
Industrial applicability (IA)	Claims	1-6	YES
	Claims		NO

2. Citations and explanations:

Document 1: JP 11-113724 A (Yamasho K.K.), 27 April 1999

Document 2: JP 5-171614 A (Sumitomo Rubber Industries, Ltd.), 09 July 1993

The invention described in claim 1 is described in document 1 (paragraphs 0015-0018) cited in the ISR; therefore it does not possess novelty or involve an inventive step.

The invention described in claim 2 involves an inventive step with respect to the documents cited in the ISR. Documents 1 and 2 do not describe the point about a pair of guide grooves that specify the drive-in position of a pair of needle tips at a needle member at two side positions opposing the peripheral wall part of each root part pot and sandwiching the opening of the root; nor is this point obvious to a person skilled in the art.

The inventions described in claims 3 and 4 are described in of document 1 (paragraphs 0015-0018) cited in the ISR; therefore it does not possess novelty or involve an inventive step.

The invention described in claim 5 is described in document 1 and document 2 (paragraphs 0009, 0016-0017, Fig. 1) cited in the ISR; therefore it does not involve an inventive step. Forming the grass of document 1 like a rope by bundling a plurality of resin cord as described in document 2 and driving it into an underlying board and then unwinding the rope twists and spreading the resin cords would be easy for a person skilled in the art.

The invention described in claim 6 involves an inventive step with respect to the documents cited in the ISR. Documents 1 and 2 do not describe the point about folding one side of of the grass material extending from a root part pot at a position where it arrives at an adjacent root part pot, pushing this folded portion into the relevant root part pot, driving a fork-shaped needle member in the interfork portion with this folded portion as the boundary, and cutting the grass material bridging between these adjacent root part pots at the middle portion. Moreover, that point is not obvious to a person skilled in the art.
